

THE DENTAL CARE KIDS™ ADVANTAGE

We have created the Dental Care Kids dental office "just for kids" so we can give your children the best that is available in pediatric dentistry.

- Dentists are pediatric and orthodontic specialists.
- Staff is specially trained to work with children.
- The office is designed for children to learn and have fun.
- Orthodontic specialist is part of the team.

Our Commitment

Our commitment is to blend learning and fun into every dental visit so your children will look forward to coming here. We will help get them off to the best possible start to good dental health that will lead to a lifetime of good care. We look forward to your visits to our office.

—The Team at Dental Care Kids

DENTAL CARE KIDS™ ADVANTAGE

"In the final analysis it is not what you do for your children, but what you have taught them to do for themselves, that will make them successful human beings."

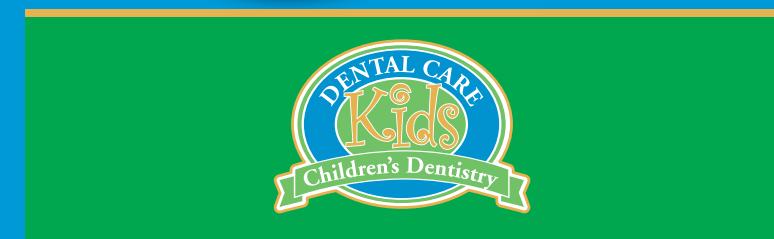

—Ann Landers

1500 Summer Street
Stamford, CT 06905

Specialty treatment may be performed by dentists who are not certified as specialists, according to state law and administrative rules.

DENTAL CARE KIDS™ ADVANTAGE

Benefits of a Pediatric Dentist

Just like a pediatric medical doctor is specially trained to care for your child's medical needs, a pediatric dentist has two years of additional training in the care of children from infancy through adolescence. They work with all types of child behavior as well as special needs patients.

Our Team

Our doctors are Pediatric and Orthodontic dental specialists. They have dedicated their careers to helping children. Our administrative and clinical staff have great professional skills and they really enjoy working with children.

Our State-of-the-Art Office

Our whole environment is designed for children. We have the best technology and materials including safer low-dose digital dental x-rays for less radiation and special little x-ray sensors for kids. We use only mercury-free fillings. We even have a dental laser which often requires no novocaine.

Our multimedia approach promotes education about dental health and creates positive associations so that children will want to come to the dentist. Consistent with good medical practice, we use recyclable and environmentally friendly materials and systems.

It's Important for Dental Visits to Be Fun

An atmosphere that encourages exploration and fun leads to positive associations and helps a child establish trust and confidence that will last a lifetime. There is something of interest everywhere you look. Big screen TVs in every room, arcade quality games and movies for younger children and teenagers make dental visits a treat. Positive reinforcement with recognition and contests where everyone gets prizes makes children feel

special and want to do better with their snacking and home care. Some children are apprehensive in new environments so we will work with your child at a pace that suits them best to become comfortable here.

Starting Early...Staying Healthier

The American Academy of Pediatric Dentistry recommends that children begin regular dental visits around their first birthday. Establishing good habits is much easier when you start early. We can help parents with infant oral health care, proper fluoride, good nutrition, how to decrease teething discomfort and prevention of dental decay. Problems can be detected, treated early, or avoided all together.

Four Steps to Help Your Children Have Great Dental Health

- Keep dental checkups consistent and regular...every 6 months.
- Minimize the frequency of sugar contacts throughout the day.
- Use professionally recommended fluoride supplements as your children grow from infancy to adolescence.
- Daily home care with brushing and flossing.

Emphasis On Education

If we can get children curious they will want to learn. We use a miniature TV camera so you and your children can see inside their own mouth. We have dental toys and video educational programs. At home, visit our website, DentalCareKids.com for tips on better brushing and flossing, thoughtful snacking that emphasizes reducing the frequency of sugary foods and the benefits of strategic fluoride to help reduce decay.

How Often Should My Child Come for Dental Checkups?

Regular checkups every six months helps your child reduce cavities by emphasizing preventive measures, reinforcing home care, applying professional fluoride or sealants as needed and suggesting dietary modifications. Professional cleaning removes plaque that builds up and leads to gum infections and decay. Preventing problems and catching them while they are still small is the key to long-term dental health.

Working With Dental Insurance

As an unrestricted office, we can work with virtually any insurance company to help you get every benefit you are entitled to, while maintaining the integrity of the doctor-patient relationship to ensure that you get the best quality of care that your child deserves.

Orthodontic Specialist on Staff

Consultations with the orthodontist are readily available. Early interceptive orthodontic treatment can help minimize problems down the road.
